

THE FACTS Fentanyl

It is **often added to other drugs** because of its extreme potency, which makes drugs cheaper, more powerful, more addictive, and more dangerous.

Recognizing the **SIGNS OF OVERDOSE** can save a life. Here are some things to look for:

- Small, constricted “pinpoint **pupils**”
- Falling asleep or losing **consciousness**
- Slow, weak, or no **breathing**
- Choking or gurgling **sounds**
- Limp **body**
- Cold, clammy, and/or discolored **skin**

If you aren't sure whether a person is high or experiencing an overdose, treat the situation like an overdose. You could save a life. Here's **WHAT TO DO**:

1. Call 911 immediately.*
2. Administer naloxone,** if available.
